## Problem

There is no set format for incoming high school transcripts so they are processed manually. ASU pays around **80** student workers to type data, costing the school **\$1024/hr** (**\$12.80/hr per person** )

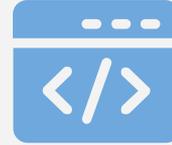

# Software Solution

Transcript  
Received

Collect Array of  
Data

Convert Collected  
data into XML

Extract Required  
information

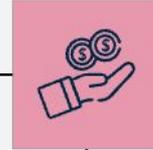

# Impact

## Efficient

Processing time, 50% of average (17 min), learning curb reduced

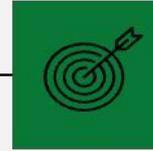

## Cost Effective

Tier based price point , affordable for low-income institutions

## Secure

Robust framework with few human touch points FERPA Regulations.

## Accurate

Prevent inconsistencies, while maintaining processing flexible and auditable

**Standardize within the industry, making it a benchmark for quality and performance nationwide.**

Funding Breakdown:

FERPA CERTIFICATIONS **\$1500**

Marketing **\$2000**

Security and Maintenance **\$1500**

Total: **\$5000**

Roles

## Business Execution Strategy

- 1 Transcription aims to pilot our software at Arizona State University in fall of 2023. We will do a semester long test run, and then collect user experience surveys to make adjustments where needed.
- 2 After our initial launch we will reach out to Maricopa Community College and other feeder schools to partner.
- 3 Record the **increase in cycle time** and calculate **economic profit** . Update universities on a regular basis, allowing them to see the **value added** from our software.

## Conferencing with Expert Institutions

Standardization of Postsecondary Education on Electronic Data Exchange Committee (SPEEDE)

Takeaways:

**No** current products necessarily “read” transcripts

- ❖ High school budgets lead to diversity
- ❖ Paper, PDF, and PDF with XML
- ❖ **Common digital layout** to transfer data into PeopleSoft
